

Value of Future Internet capabilities: Multi-domain (Big-) Data Sharing Models

Stakeholder meeting
Big Data for Logistics
Oct 4rd 2016

Dr. ing. Leon Gommans
Science Officer
Air France KLM IT Technology Office - R&D
Guest researcher UvA/SNE

COMMIT/

Contexts with potential value to share data

Passenger flow handling

Predictive Maintenance & Scheduling

Cargo load optimization & scheduling

Passenger experience

Cybersecurity

project)

Sharing Big Data in a collaborative group of enterprises?

Sharing Big Data assets needs:

Clearly defined and agreed common benefit

Established common rules governing use, access and benefit sharing.

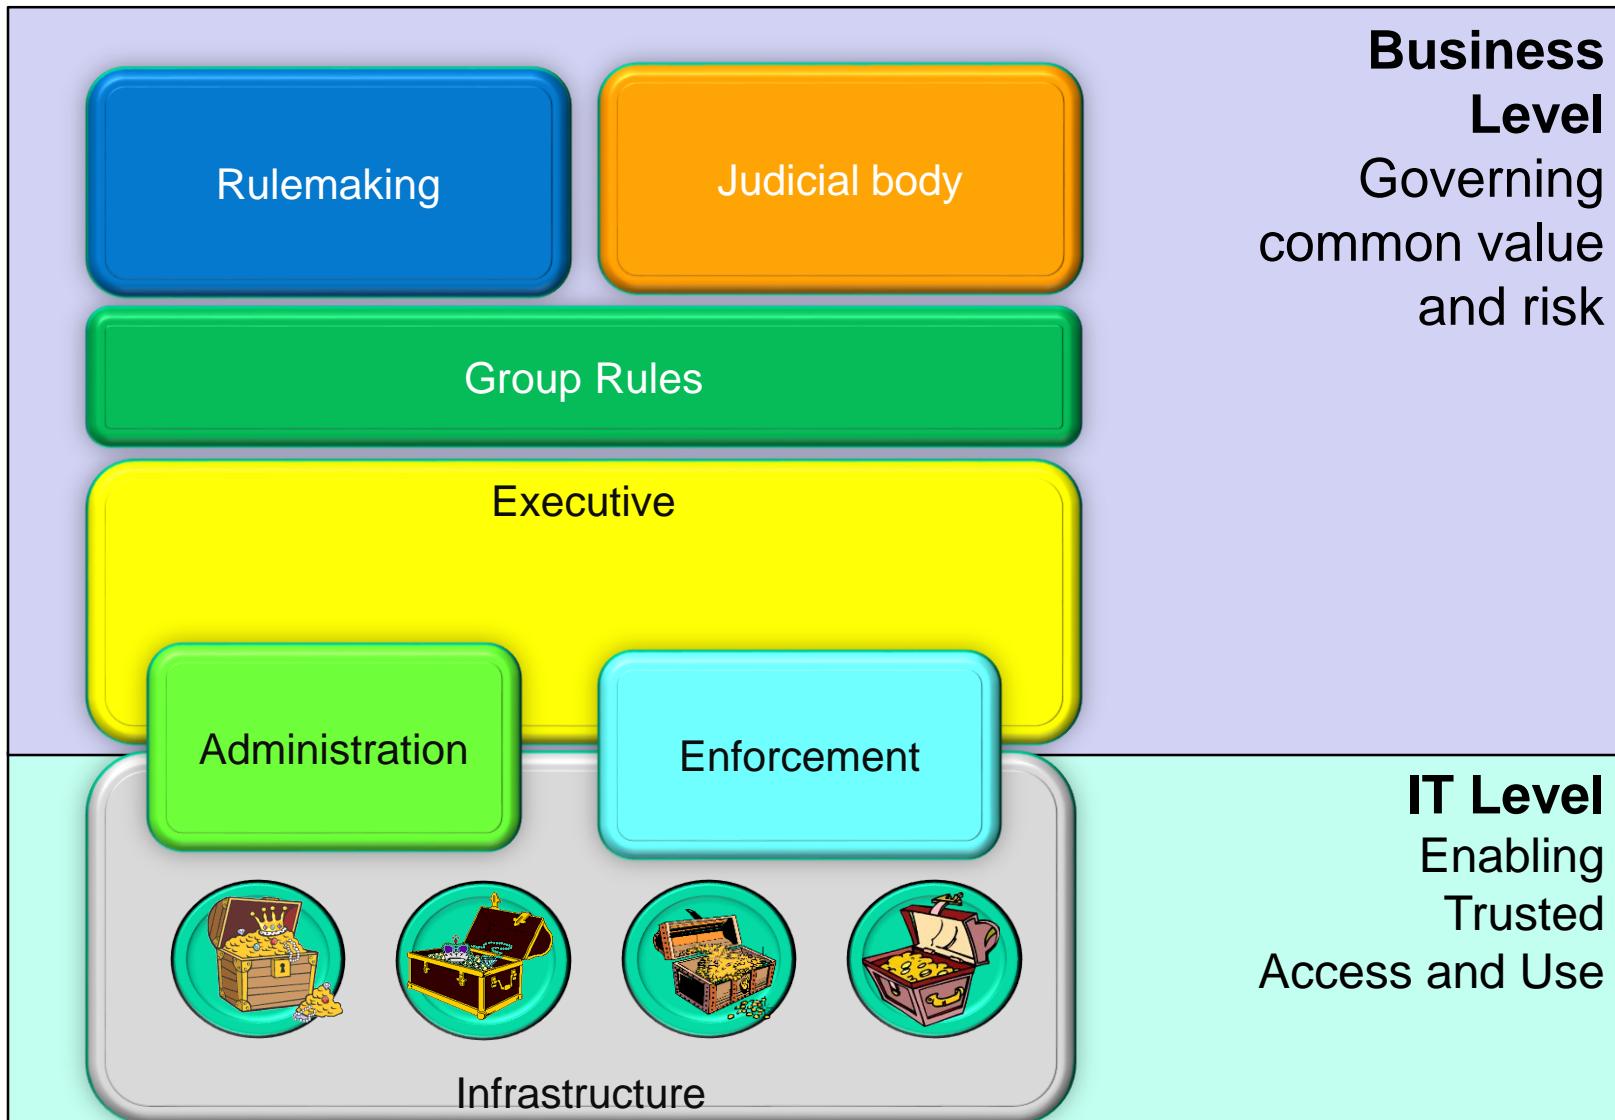

Organizing trust amongst group members as means to reduce risk

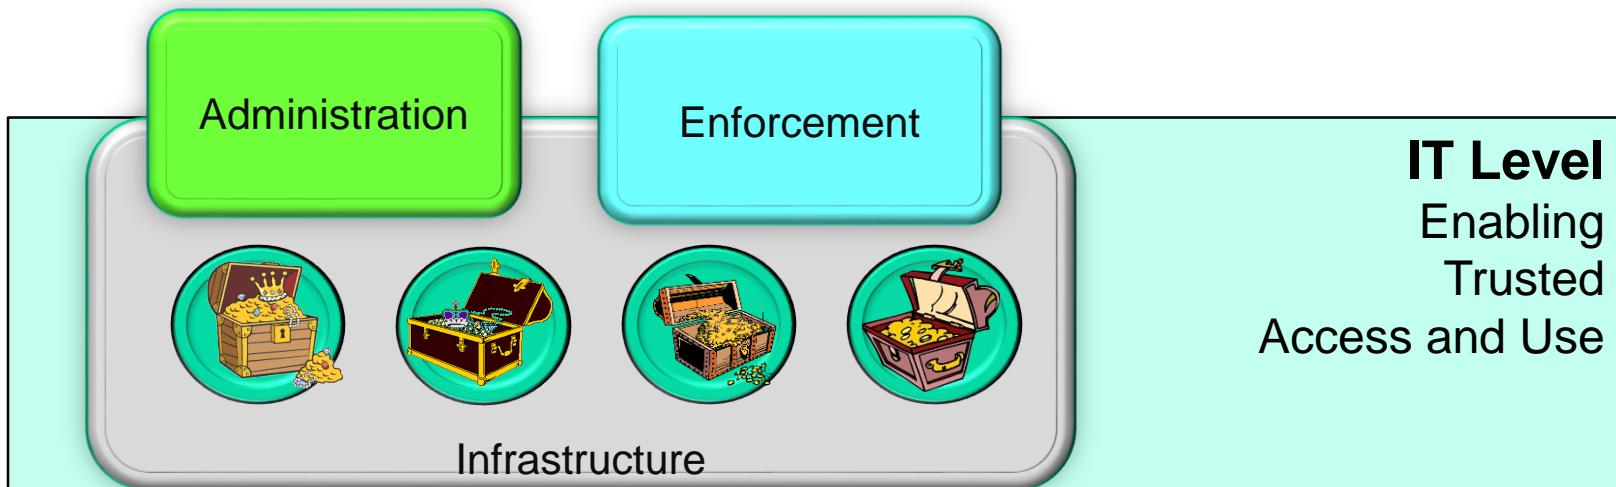

Infrastructure supporting implementation of trust

Organizing Trust within a group*

- See Chapter 5 PhD Thesis: “Multidomain Authorization for e-Infrastructures”, Leon Gommans – Dec. 2014h

Research questions

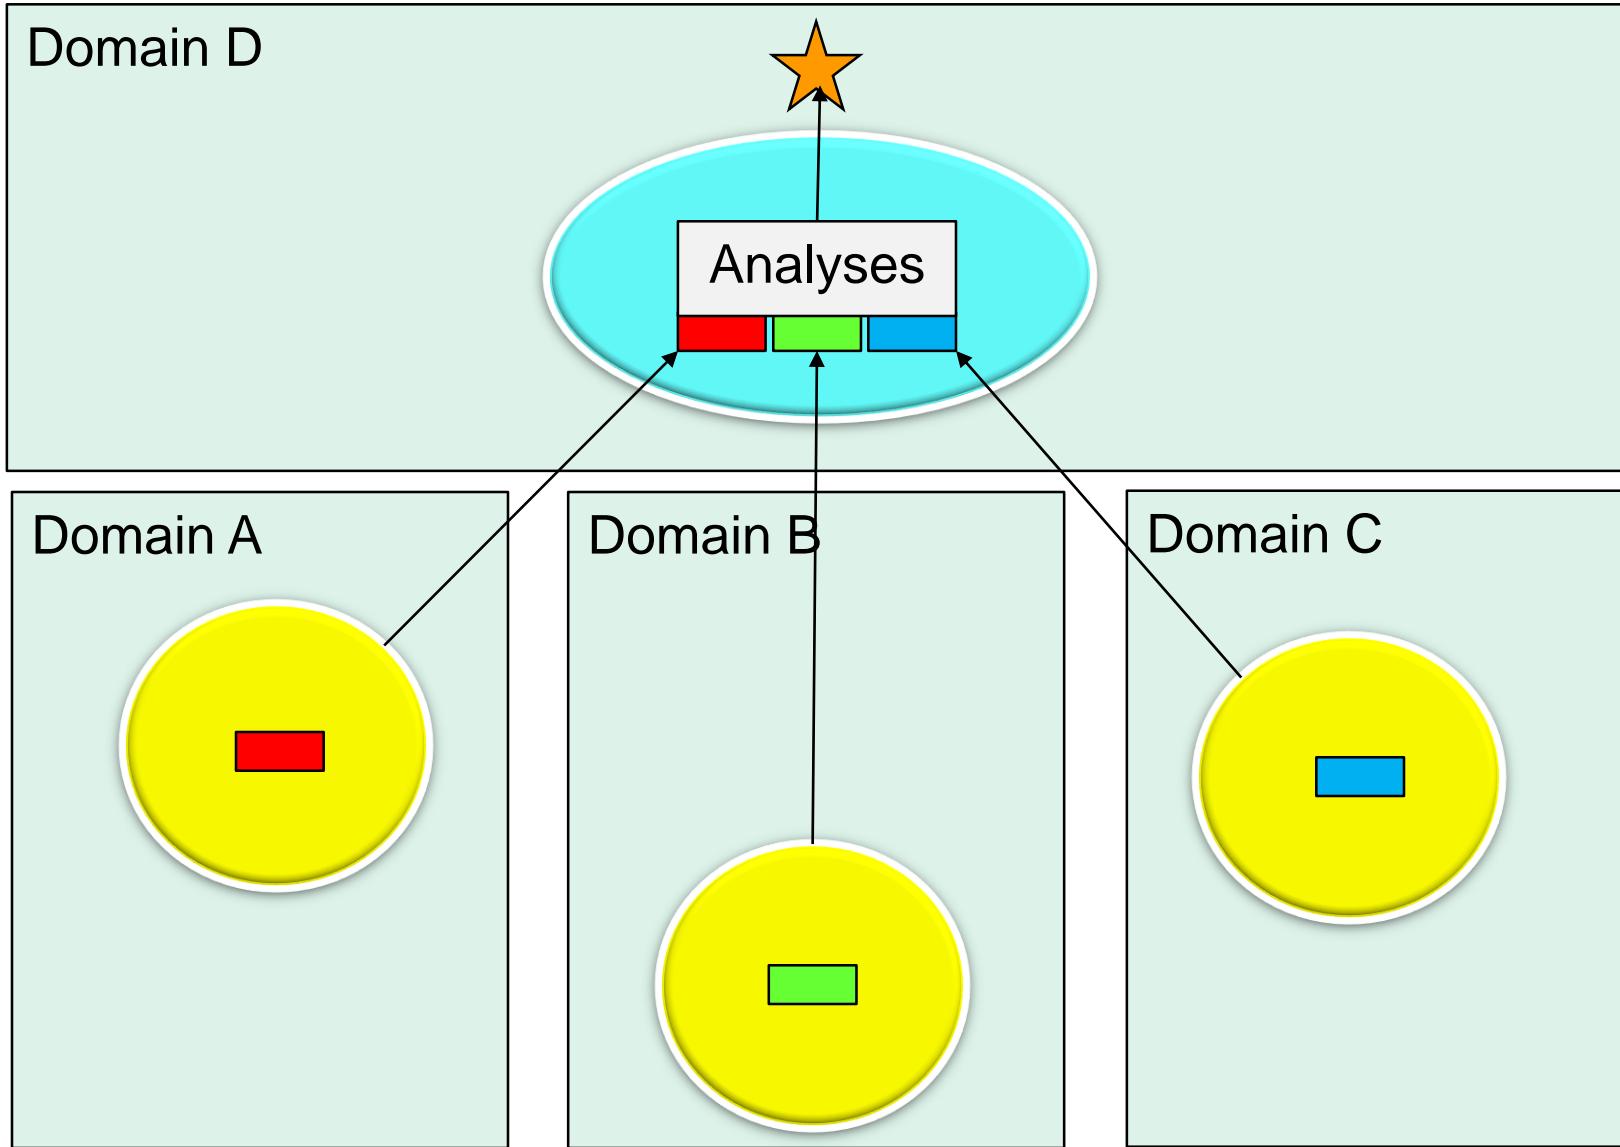

1. Given an agreed benefit to share data within a group of autonomous organisations:

How can trusted sharing of big data assets be securely implemented in an infrastructure?

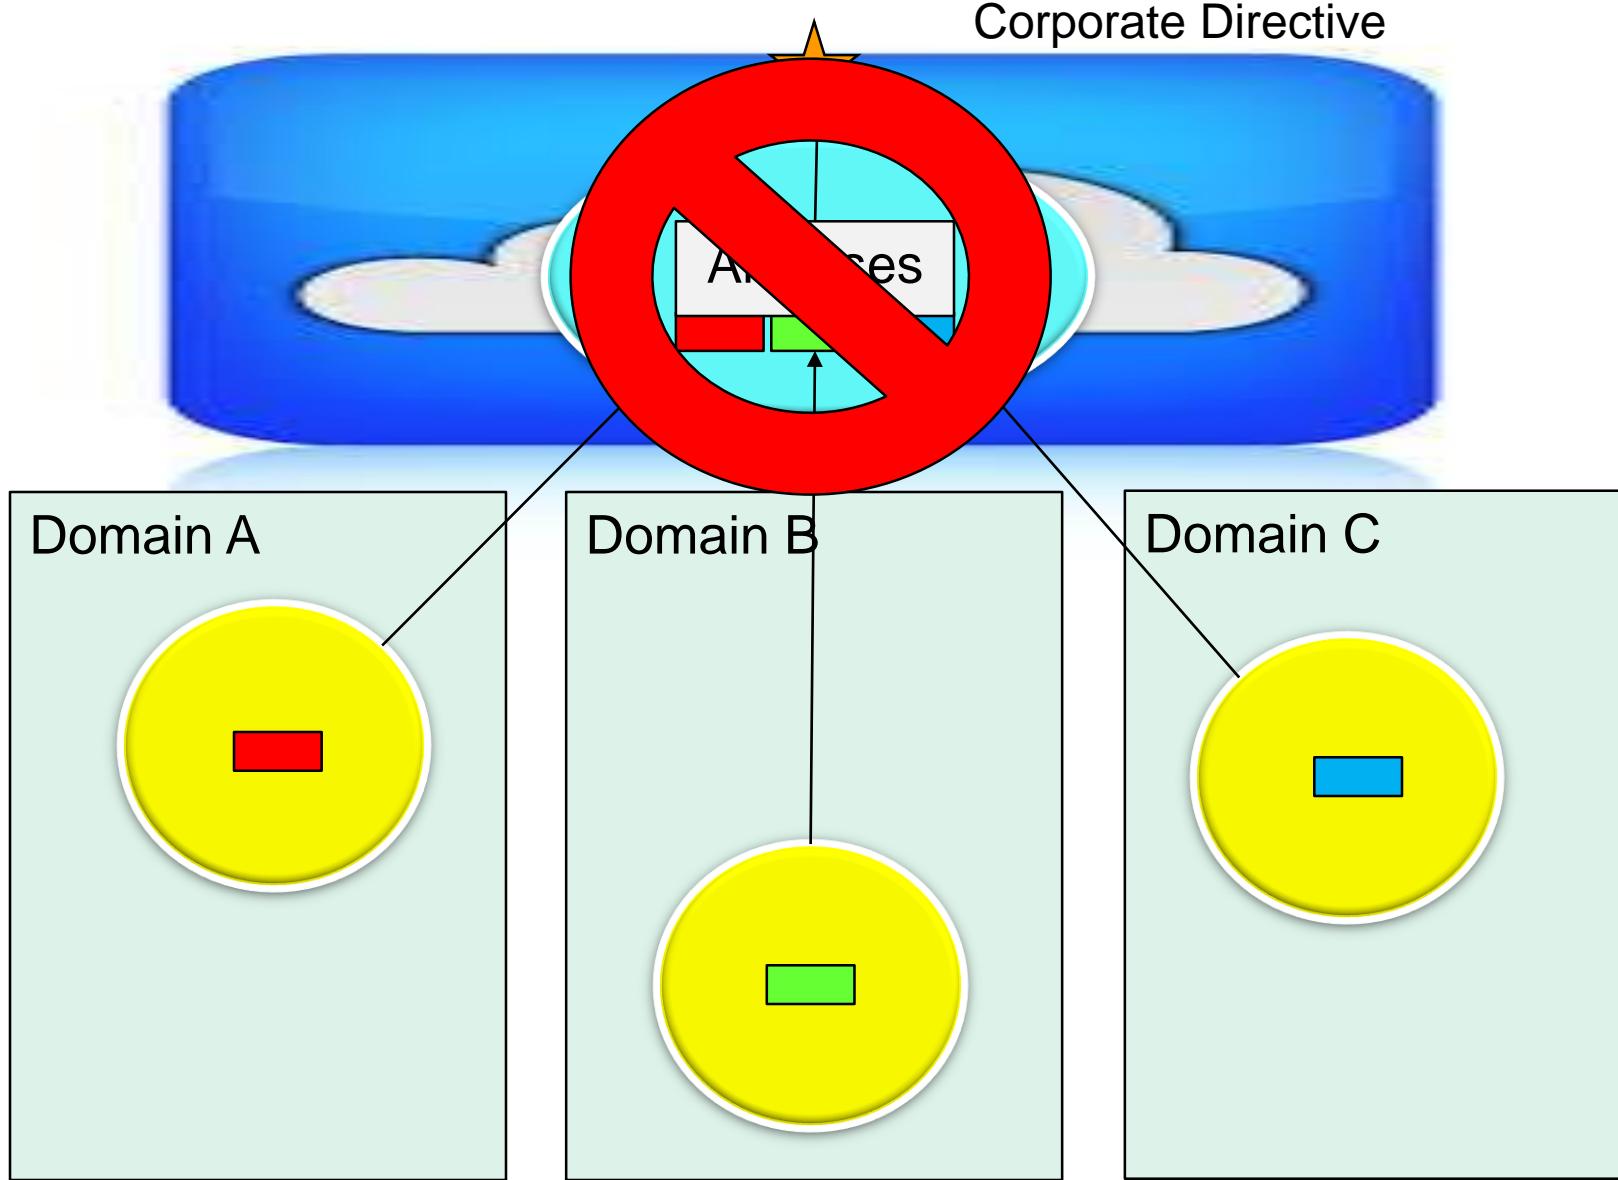

2. Given future, software definable Internet capabilities provides virtually **unlimited** amounts of **dedicated and secure bandwidth**:

What infrastructure models are best suited to perform big data analyses?

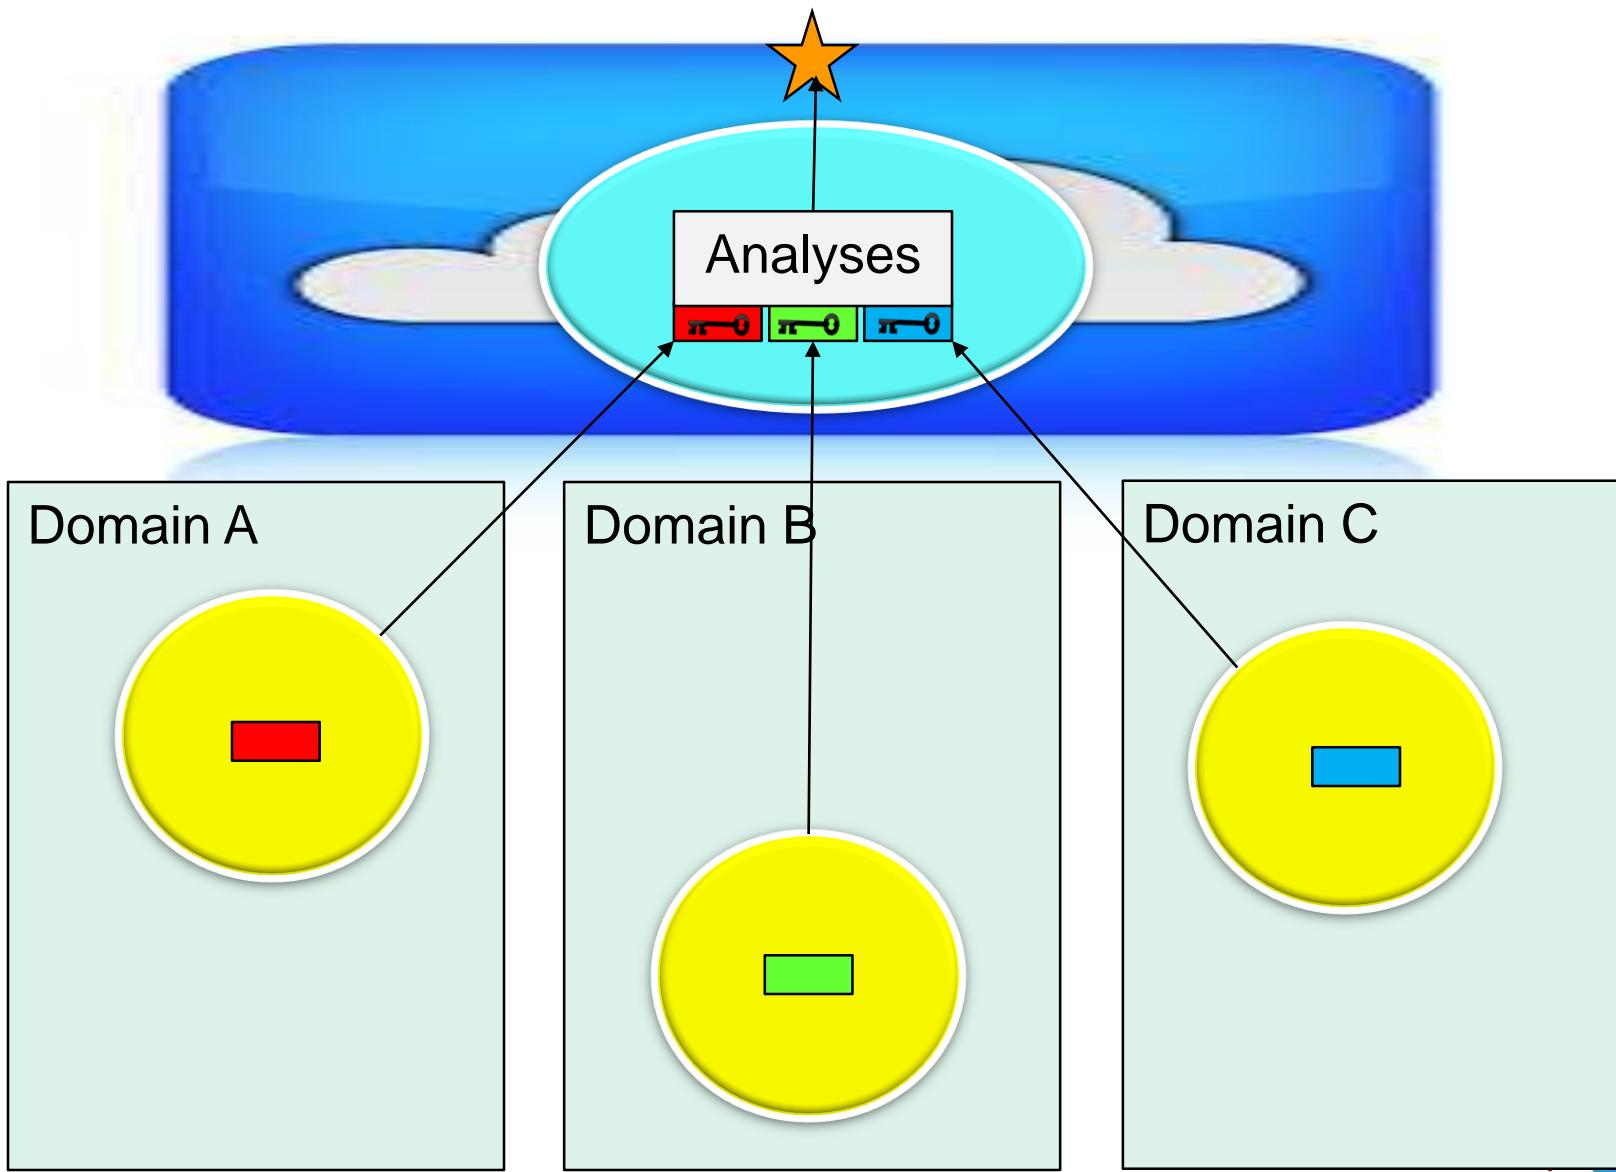

Traditional Multi-domain Model

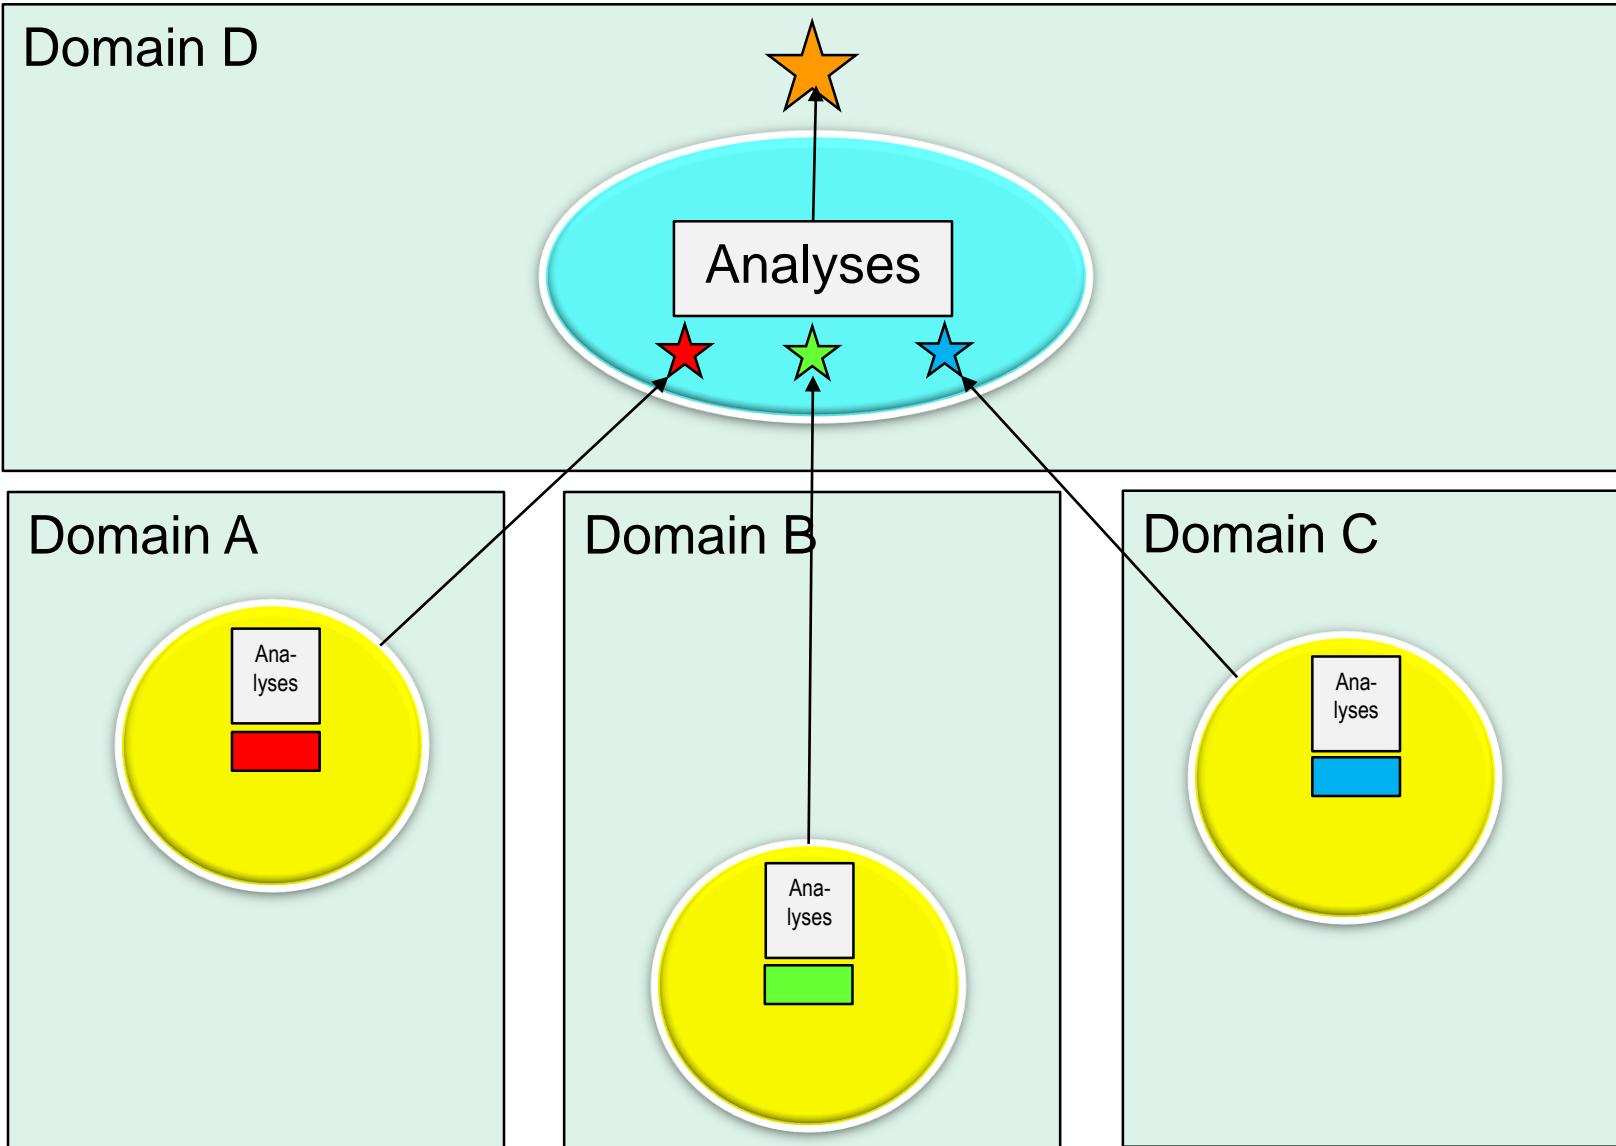

Multi-domain in public cloud

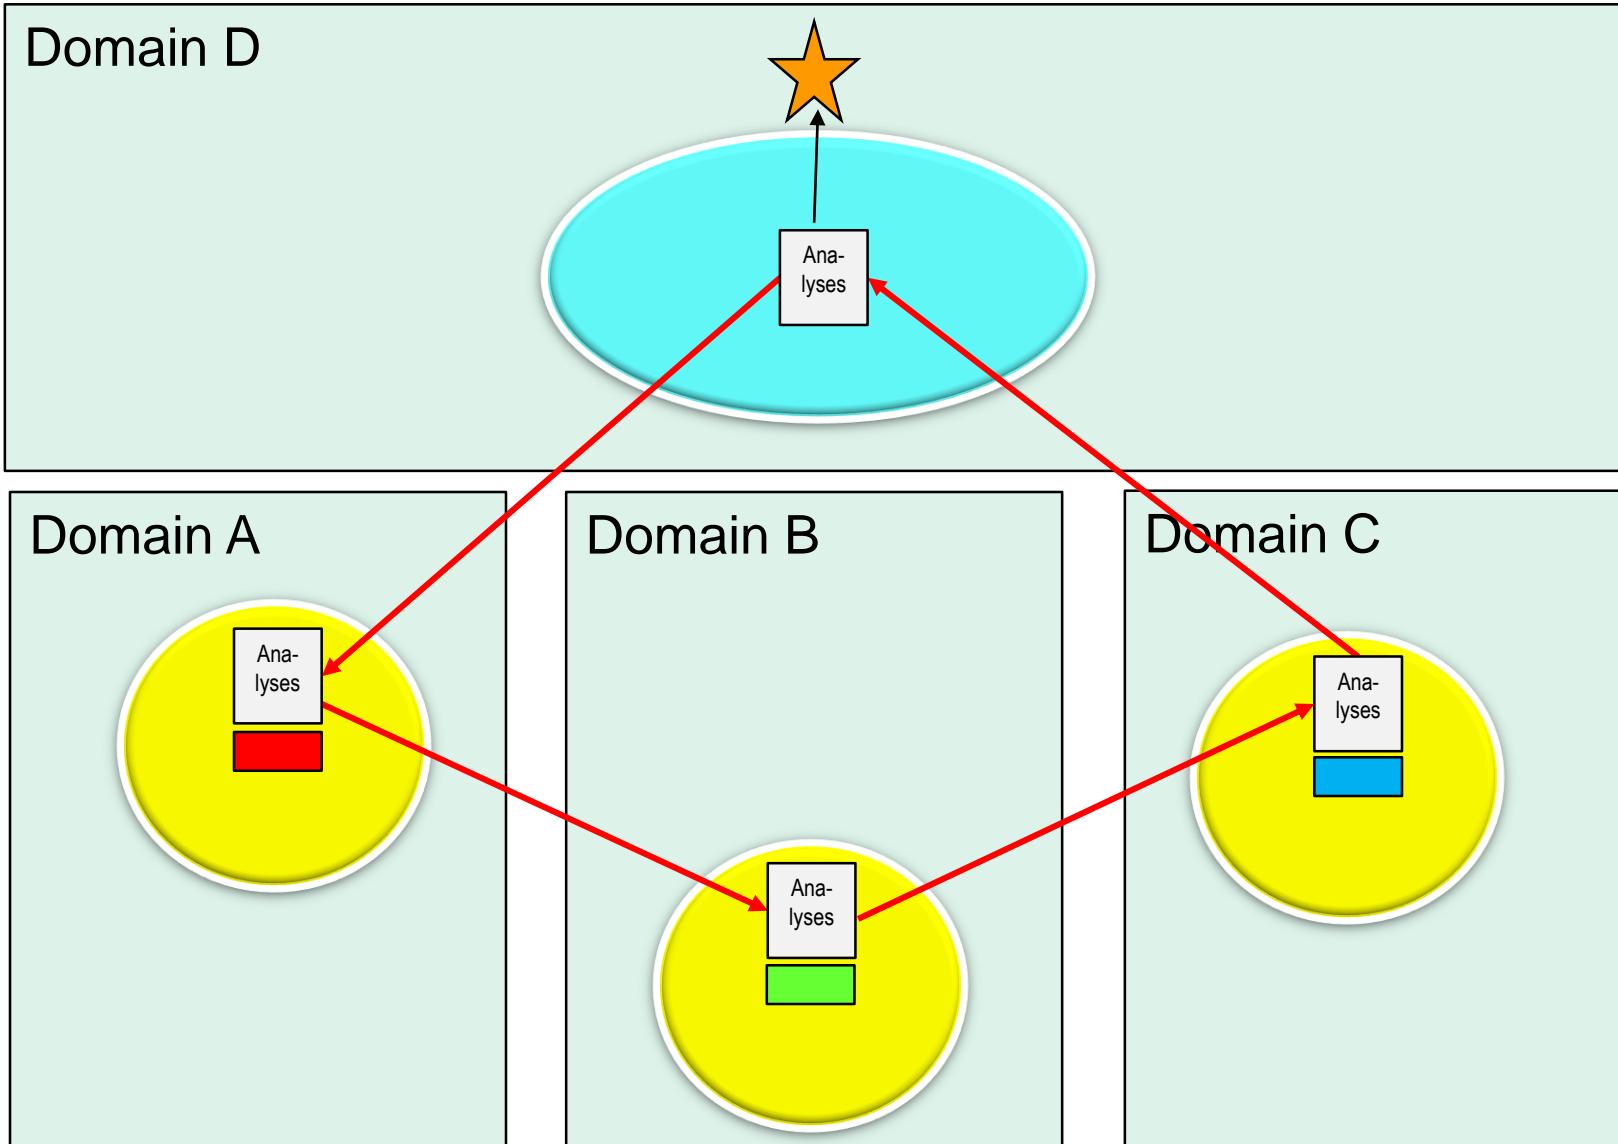

Encrypted data in public cloud

Analyses on spokes, consolidate at hub

“Turntable model*”, reporting result to hub

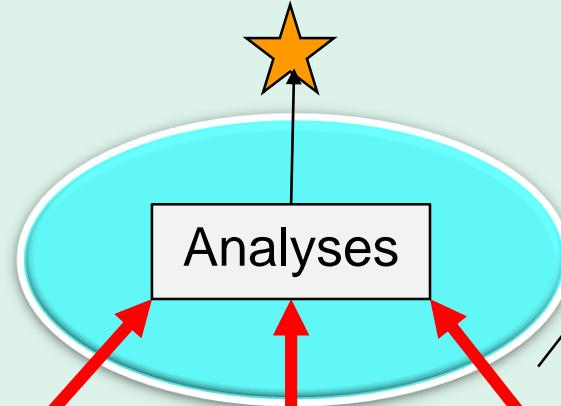

Demo at Supercomputing 2005: Seamless Live Migration of Virtual Machines over the MAN/WAN

Franco Travostino, Paul Daspit, Leon Gommans, Chetan Jog, Cees de Laat, Joe Mambretti, Inder Monga, Bas van Oudenaarde, Satish Raghunath, Phil Wang - FGCS Oct 2006 pg 901-907.

Sharing using “unlimited” bandwidth.

Domain D

E.g. a 100 Gb/s link is potentially **20x faster** when compared with a local hard disk.
